

Let's Not Forget About The Patients

In an industry that is often consumed with news about huge acquisitions, multi-billion dollar profits, and regulatory guidelines - it's really easy to forget about the patients. **At CTI, we are dedicated not only to our sponsors and our employees, but most importantly, we are dedicated to the patients. Our mission is to conduct clinical trials that benefit the lives of patients, and we work relentlessly to help develop cures for unmet medical needs in critically and chronically ill patients.** Whether it is through our CRO services, jointly managing patients with our research sites, or directly seeing patients at our CTI Clinical Research Center (CTI CRC) - patients are the most important part to every trial that we manage.

Patient safety and well being are the most important aspects of clinical trials. **We work with the top hospital and research sites around the world, with elite medical staff and facilities, to ensure that the patients in our trials always receive the utmost standard of care.** We have worked with these research sites for decades, so we fully trust their capabilities to recruit and care for study patients. At our CTI CRC, we have top medical staff conducting our trials, and our Phase I Unit sits on a hospital campus with full emergency capabilities.

CTI also has relationships with patient advocacy and support groups around the world in a range of disease areas, which keep us at the forefront of issues affecting patient well-being and allow us to be voices of change for patients with these illnesses.

CTI is often involved in the very early stages of drug and device development with our sponsors, including protocol writing, medical consulting, and drug dosage optimization - all of which ensure that patients' safety and best interests remain at the forefront of the trial design and execution.

Patient education is a large part of recruiting subjects to be involved in clinical research, and we make sure that our CRAs and other trial staff are therapeutically experienced and extensively trained on study protocols to ensure they can educate our research sites properly, who in turn, educate patients considering our clinical trials. As trials get more complicated, the goal is to make sure that patients understand the risks and benefits of participating, and we make sure that our sites excel at this.

Patients are often concerned about being away from their families for a clinical trial, or without the comforts of home. **With CTI's extensive history in complex trials, we excel at managing the logistics that accompany these studies, including ensuring that patients can participate with their families joining them, despite location or financial status.** We often transport patients to the nearest site location for a trial, and we often must think of the entire family involvement, as many of the rare disease trials we manage include children. For studies in our CTI CRC, we ensure that the comforts of home are in place for our patients, including private rooms, entertainment options, and hearty meals.

At the end of the day, if you ask anyone working in clinical research why they are in the field, they will say they are here to help people. The patients are the ones who are always at the forefront of every decision. **At CTI, we're optimistic that we will continue to advance life-changing therapies to patients all over the world.** Let us not forget about the patients, for without them - there would be no progress in treating or curing diseases.

CTI Cares Spotlight

Samaritan's Purse

Samaritan's Purse is a nondenominational evangelical Christian organization providing spiritual and physical aid to hurting people around the world. Since 1970, Samaritan's Purse has helped meet needs of people who are victims of war, poverty, natural disasters, disease, and famine with the purpose of sharing God's love through His Son, Jesus Christ.

Nominated by: Sharon Blackaby -
Executive Administrative Specialist
